

Going green now means having a positive impact on both the environment and your bottom line

## Super Therm is a practical, proven and cost-effective method to control heat buildup for school district busses

Super Therm is a roof coating that contains four unique ceramics. The ceramic makeup of Super Therm gives it an insulation equivalent to R-19 (6-8 inches of fiberglass batt insulation).

Super Therm is a non-conductive ceramic coating that repels 99.5 % of long-wave energy, 92.5% of short-wave energy and 99.9 % infrared heat energy.

Simply applying a coating of white paint as some bus manufacturers do, is no substitute for Super Therm.

**Super Therm stops the heat at the surface, before it can penetrate inside!**
